

**METHOD OF ADHERING MEMBERS AND AN ASSEMBLY FORMED
THEREBY**

ABSTRACT

5 The method of adhering members includes positioning of an adhesive
material between an attachment surface of a first member (e.g., a door beam)
and a second member (e.g., a bracket). Thereafter, the adhesive material is
at least partially cured to adhere the material to the attachment surface to
form an assembly and the assembly is assembled to an article of
10 manufacture (e.g., an automotive vehicle).
